

# The right things right

Software services & expert resources

**P**rosys combines data and technology, thereby creating competitive advantage, cost savings and better quality. We design and implement unique software solutions, which integrate with existing systems and streamline business and production processes.

**W**e build lasting information technology solutions, through engineering proficiency, agile methods and project know-how. We are experts in measurement, control and monitoring, device management, automation, quality assurance and communication software. We also develop innovative enterprise software that connects customers, businesses and technology – for example customized e-commerce solutions integrated with ERP systems.

**W**e believe that transparent project management is a key factor when fulfilling software assignments. Software development is challenging work, yet it does not have to be inconvenient. We ensure productivity by doing the right things right. This results in delivering projects on schedule and within budget – as well as satisfied customers, testified by surveys.

**U**sing software engineering terminology, our expertise is managing project, requirements, design and implementation. Our customers can be confident that software development is carried out with technical professionalism, productively and by understanding the underlying business needs.

## Project delivery

Delivering a complete software solution: feasibility study, project planning and management, specification, design, software production, testing, integration, documentation, support and maintenance.

## Consulting

Planning, specification, design, architecture and technology consulting services. IT and integration strategies, integration processes and technology platforms.

## Software development

We know latest software engineering methods, tools and design patterns. Complementary tasks can include constructing user manuals, system localization, training, or managing the entire lifecycle of the system.
