"Right things right

Prosys integrates data and technology, thereby creating competitive advantage, cost savings and better quality. We design and implement unique software solutions, which stand out from competition and integrate with existing systems and streamline business and production processes.

We deliver complete IT and software solutions or work within development teams of customers. We master technical software and develop solutions for the suppliers of equipment and systems, and for industrial establishments. We develop top of the range enterprise software: solutions for ecommerce, monitoring, reporting, process automation and system integration.

We select best suited tools and technologies for each solution. We are a Microsoft Partner, and we also master Linux-systems. Our server facilities fulfill the provisions of the Finnish Communications Regulation Authority and dual internet connections on operator level guarantee server data communications. Our partner network enables us to respond to different customer needs in a comprehensive way.

Co-operation with the customer and educated personnel are important to us. In our thinking, transparent project management is a fundamental requirement to completing software projects. Our core competence is in managing projects, requirements, design and implementation.

We ensure the results by doing right things right. Software development is challenging work, yet it does not have to be difficult. Our customers can be confident that software development is carried out with technical professionalism, productively and respecting the underlying business needs.
